

Goals of the FEPS Initiative

- Facilitate a participatory process and develop a framework for engaging utilities, regulators, and other key stakeholders in a dialog on “The Future of Electric Power in the South” (FEPS)
- Evaluate different strategic approaches of stakeholders within the context of alternative scenarios (economics-policies-technologies) impacting the South’s electric grid
- Stress-test the process and framework focused on CHP and PV futures, and widely disseminate the results to broaden the discussion
- Finalize this phase by December 2015

Charge to the Stakeholder Group for this Workshop

- Identify the key driving factors and scenarios that are likely to impact the grid in the South (in 2020-2030-2040)
- Identify the strategic approaches that will work best to address these driving factors and scenarios
- These results will serve as input to our ongoing modeling (GT-NEMS and GT-DSM)
- We also want to define ways to keep the Working Groups engaged, over the summer and beyond
